

Connect Version 7.1.5.8 Release Notes

Connect 7.1.5.8 supports the following iMIS versions:

Minimum Version	Maximum Version
20.1.1.4	20.2.25.3200

New Features

Registration Class Error Handling

The etouches iMIS log report will now clearly identify errors with registrations classes - whether in the event definition or an individual registration.

Default Address Purpose

New contact records created in etouches were inserted into iMIS using the first address purpose listed in the iMIS setup. Users can now specify the default address purpose to use when creating new contact records in iMIS via a configuration setting in the web.config file.

Resolved Issues

Registration Date and Time Zone Consistency

Registrations and registration modifications were not written to iMIS based on the event time zone setting defined in etouches.

Payment Dates on Modified Registrations

When payment for the original registration failed (invalid card number, payment could not be processed, etc.), subsequent registration modifications, including successful payments were saved to iMIS with the date of the older failed payment rather than the modification/successful payment date.

Complimentary Dues Items in iMIS

Complimentary dues items added as part of an etouches registration did not correctly reflect in the iMIS dues subscription record.

Company Name in the iMIS Registration

The company name provided in the etouches registration did not update both the registration and registrant badge.

How to Receive the Update

Please contact the C Systems Help Desk to co-ordinate the installation of the update. If you prefer to install the update yourself, we will provide installation instructions.
